

The European Energy Efficiency Conference 2020

4 - 6 March 2020

The European Energy Efficiency Conference addressed how the energy transition is progressing throughout Europe and worldwide in regards to policies, markets, financing, e-mobility, energy efficiency, industrial decarbonisation and more.

Over the course of the 3 conference days, first measures of the Green Deal were revealed and examples of how a better society is already being created through the energy transition were presented. Industrial energy efficiency was also a main topic - independence from fossil energy is becoming a key factor for industrial competitiveness and will characterise the next big step in the industrial transformation. Dedicated sessions presented how this can be achieved. The conference also offered an update on how the energy transition in the mobility sector is progressing. Markets, battery innovations, best practice examples and more were addressed. In addition, since the energy transition requires investments, an array of smart financing instruments and programmes that unlock possibilities was showcased.
